- (1) An online thesaurus is available in this field.
- (2) Enter HELP STERMS at an arrow prompt in the file for a list of superterms.
- (3) Numeric search field that may be searched using numeric operators or ranges.
- (4) The Controlled Term (/CT) search field contains bound phrases from the following IT display subfields: Major Concepts (from 1969); Chemicals & Biochemicals (from 1969); Diseases (from 1998); Parts, Structures, and Systems (from 1998); and Time (from 1993), as well as MeSH terms for diseases, when available. To restrict /CT terms to an IT subfield, link the /CT terms to the subfield heading or the subfield code in /FA, e.g., S CHEMISTRY/CT (L) MAJOR CONCEPTS/FA.
- (5) Search with implied (S) proximity is available in this field.
- (6) Only U.S. patents published between 1946 and 1989 and since 1995 are available.
- (7) Use the FA field to link terms to IT display subfields, e.g., S MALARIA (L) DISEASES/FA. Enter HELP FA at an arrow prompt to see a list of FA terms and examples.
- (8) The /IT search field contains single words from all ORGN display subfields and their headings as well as single words from the CN, RN, CT, GT, and ST fields, and MeSH terms for diseases, when available.
- (9) The /ST search field contains single words and bound phrases from the following IT display subfields: Methods and Equipment; Sequence Data; and Miscellaneous Descriptors.
- (10) Either STN or Derwent format may be used.

(1) The CT field displays the following IT subfields: Major Concepts; Chemicals & Biochemicals; Diseases; Parts, Structures, and Systems; and Time.

(2) Custom display only.

(3) The IT field displays all of the IT subfields as well as ORGN, GEN, GT, and RN fields.

(4) The ST field displays the following IT subfields: Methods and Equipment; Sequence Data; and Miscellaneous Descriptors.

(5) No online display fee for this format.

(6) SCAN must be entered on the DISPLAY command line, i.e., D SCAN or DISPLAY SCAN

(7) Patent numbers are available in STN and Derwent format. The format for DISPLAY, PRINT, SELECT, and SORT is set using the SET PATENT command. STN is the default format. Enter SET PAT DERWENT to change to the Derwent format. To reset to the STN format, enter SET PAT STN.

SELECT, ANALYZE, and SORT Fields

The SELECT command is used to create E-numbers or an L-number containing terms taken from the specified field in an answer set.

The ANALYZE command is used to create an L-number containing terms taken from the specified field in an answer set.

The SORT command is used to rearrange the search results in either alphabetic or numeric order of the specified field(s).

ABSTRACT: The purpose of this study was to evaluate how the outcome of patients with extrahepatic cholangiocarcinoma (EHBC) may have been influenced by tumor location and treatment selection. The primary endpoint of this study is overall survival (OS). Between January 1983 and December 1997, 221 patients with biliary tumors were evaluated at Thomas Jefferson University Hospital. Of these, 118 fit the inclusion criteria for this study. The extent of disease was assessed by computed tomography, percutaneous transhepatic cholangiography or endoscopic retrograde cholangiopancreatography, magnetic resonance imaging, and ultrasonography. All patients had histologic confirmation of malignancy. Roux-en Y, hepaticojejunostomy, or choledochojejunostomy followed surgical resection of the primary tumor. Palliative measure (PS) included biliary catheter placement without brachytherapy or external beam irradiation (RT). RT was delivered via high-energy photons. Intraluminal brachytherapy was performed via percutaneous biliary catheterization with iridium-192 ribbon sources. Chemotherapy consisted of either intravenous 5-fluorouracil alone or in combination with doxorubicin, mitomycin C, or paclitaxel. PS consisted of metal bile duct stent placement. Median follow-up time for the entire group was 102 months and 43 months for patients who were still alive at the conclusion of the study period. Patients with proximal tumors underwent resection (n=5), surgery and RT (n=23), RT only (n=31), chemotherapy only (n=6), or PS (n=12). Patients with distal tumors were treated with surgical resection (n=17) or a combination of surgery and RT (n=13), RT only (n=6), or PS (n=4). Median survival time (MST) for all 118 patients was 22 months. The MST for patients with distal tumors was 47 months versus 17 months for those with proximal tumors. The MST has not been reached for patients with distal EHBC treated with surgical resection and postoperative RT, whereas the median survival for those treated with surgery alone is 62.5 months. However, 4 of 17 of these patients had in situ carcinoma. Six patients had distal tumors treated with RT only with a MST of 6 months. Patients with proximal tumors treated with surgery and RT had a superior OS at 5 years compared to patients treated with RT alone (24 vs. 13 months; p=0.007). There was an improved OS in patients with proximal tumors treated with surgical resection and RT compared to surgery alone (p=0.023). There is no discernible influence of chemotherapy on outcome in patients with proximal EHBC. The MST for patients treated with PS was 3.5 months. Surgery and postoperative RT appear to be better than either surgery or RT alone in patients with proximal EHBC. In patients with distal EHBC, the addition of resection and RT appears to offer an advantage, which is increasingly apparent with longer follow-up time. The prognosis remains dismal for patients treated with palliative intent.

 Roux-en Y hepaticojejunostomy: clinical techniques, therapeutic and prophylactic techniques; biliary catheter replacement: clinical techniques; choledochojejunostomy: clinical techniques, therapeutic and prophylactic techniques; computed tomography: clinical techniques, diagnostic techniques, imaging and microscopy techniques, laboratory techniques; endoscopic retrograde cholangiopancreatography: clinical techniques, therapeutic and prophylactic techniques; external beam irradiation: clinical techniques; intraluminal brachytherapy: clinical techniques; magnetic resonance imaging: clinical techniques, diagnostic techniques, imaging and microscopy techniques, laboratory techniques; percutaneous transhepatic cholangiography: clinical techniques, diagnostic techniques; surgical resection: clinical techniques, therapeutic and prophylactic techniques; ultrasonography: clinical techniques, diagnostic techniques, imaging and microscopy techniques, laboratory techniques

INDEX TERMS: Miscellaneous Descriptors
 median survival time; overall survival rate; tumor location

ORGANISM: Classifier
 Hominidae 86215
 Super Taxa
 Primates; Mammalia; Vertebrata; Chordata; Animalia
 Organism Name
 human (common): aged, middle age, patient, female, male
 Organism Superterms
 Animals, Chordates, Humans, Mammals, Primates, Vertebrates

REGISTRY NUMBER: 51-21-8 (5-fluorouracil)
 23214-92-8 (doxorubicin)
 50-07-7 (mitomycin C)
 33069-62-4 (paclitaxel)
